

Dromad Hire takes first 26m Hinowa in Ireland

October 21, 2015 |

Irish general rental company Dromad Hire has taken the first 26 metre Hinowa spider lift in Ireland.

The Hinowa Lightlift 26.14 Performance IIIS has a 25.7 metre working height, 230kg capacity and up to 13.6 metres of unrestricted outreach.

The latest delivery joins two Hinowa 14.70 Goldlifts and a Hinowa 17.75 Lightlift IIIS purchased earlier this year. All four machines were supplied by Access Platform Sales (APS), the UK distributor for Hinowa.

Dromad Hire managing director Seamus Byrne said: "We are proud to have one of the largest and most comprehensive fleets of tracked booms in the Irish plant hire industry. The new Hinowa 26.14 further extends our tracked boom product offering, which are increasingly in demand with our customers."

"The LightLift 26.14 has very low ground pressure and non-marking tracks, making it ideal for working indoors on sensitive flooring as well as outdoors on soft ground. The machine retracts to pass through doorways or in between buildings and has a transport length of less than six metres."

Dundalk-based general rental company Dromad Hire has taken the first 26 metre Hinowa spider lift in Ireland

Jim Daintith of APS, visited Dundalk to hand over the machines. "Dromad Hire continues to go from strength to strength," he said. "The company is carving out a deserved reputation as a leading supplier of tracked booms in Ireland and Northern Ireland."
